A One-Stop DBF Solution Further Simplifies Database Management

HiBase Group announces DBF Viewer 2000 version 6.65. A well-known database management tool receives a new update that brings in support for TSV file format and even more powerful command line processing – a feature that professional database administrators had already acclaimed.

The old reliable DBF format is still extremely widespread. Too bad, modern trends towards online services and cloud processing seem to forget about it. HiBase Group offers a solution which is as reliable as the aforementioned format itself.

DBF Viewer 2000 is designed to effortlessly manage DBF files of any size and quantity. All range of operations including adding and editing fields and records, searching and filtering the data, adjusting the database structure are made straightforward thanks to the classic interface of the application. The program can import and export various database formats too making data migration or transfer a lot easier. Plus, the entirety of DBF Viewer's vast functionality is available through command line execution, which means the tool is natively fit for automated DBF processing.

The latest version of DBF Viewer 2000 released recently further improves command line execution. By popular demand, the program can now limit the number of records while exporting using the command line. This is helpful when a certain chunk of the database should be exported, not the whole set of data. In the update, support for TSV files is introduced as well. Tab-separated spreadsheets were very common back in the days, so having a way to import them easily is really a breeze.

Overall, DBF Viewer 2000 combines functionality with fast-paced execution and a well-designed interface. Support for 4GB+ databases, multi-threaded execution and adjustable exporting to more than ten formats make the tool a reasonable choice for professional database management.

Pricing and availability

DBF Viewer 2000 supports the entire range of Windows operating systems including XP/Vista/7/8 and 10, both 32- and 64-bit editions. The price of a personal license is \$49.95. The business license costs \$99.95. The site license costs \$199.95, and \$999.95 is asked for a worldwide unlimited license.

About

HiBase Group Company develops software for database management, processing and conversion. Each tool by the company is functional, fast-paced and independent of third-party database libraries.
